Block the Sun, Not the View!

The Solar-Shade™ Solution

Quick fact: 220 BTUs of heat and ultraviolet light enter your home per square foot, per hour, through your skylights. The *Solar-Shade* exterior skylight cover will reduce that amount to 80 BTUs, or a savings of 76%! Your *Solar-Shade* is a year-round product designed to help keep your room cooler during the warmer months and help protect your furniture and carpets from sun damage all year round. They also reduce the wind chill factor on the skylight surface during the winter and can help keep your interiors warmer by reflecting internal heat back inside!

Solar-Shades are neither a film nor a tint. They are created from a vinyl coated fiberglass and vinyl coated polyester yarn. Neither materials will stretch, corrode or support combustion. *Solar-Shades* are unconditionally guaranteed for two years and work on both clear glass or plastic skylights, as well as factory colored plastic skylights. The purchase of your *Solar-Shade* includes cleaning the exterior of the skylight, professional installation and warranty. *Solar-Shades* are available for both residential as well as commercial skylights.

Selecting the right Solar-Shade for your home

STEP ONE:

Determine if your skylight is square or rectangular.

STEP TWO:

Determine if your skylight is flat-top or domed-top.

STEP THREE:

Measure your skylight using the following directions:
 Measure from lip (#1), up frame side, across top, down frame side to lip (#2) as shown in drawing. Measure both length and width, even if skylight appears to be square.

? - Length = _____ inches
 ? - Width = _____ inches

Why buy a Solar-Shade?

- > Protect your furniture and carpet
- > Dramatically reduce unwanted heat
- > Lower your utility costs
- > Require no maintenance
- > Free phone estimates
- > No hidden costs
- > Unconditional Guarantee
